SUMMARY

Computer Engineering professional with multidisciplinary experience in artificial intelligence, software development, embedded systems, and AI infrastructure. Experienced in building, integrating, deploying, and evaluating intelligent systems, with a strong foundation in programming, system design, problem-solving, and technical project execution.

EDUCATION

B.Sc. Computer Engineering

Taif University

08/2021 – 07/2026

Taif, Saudi Arabia

- GPA: 3.67 out of 4.00
- Relevant Coursework: Machine Learning, Embedded Systems, Electronics, and Robotics.
- Achieved Distinction marks across all Computer Engineering Laboratories.

EXPERIENCE

AI Data Center Operations Bootcamp

Saudi Digital Academy (SDA) & WeCloudData

08/2026 – 10/2026

- Deployed containerized AI inference workloads using Docker, Kubernetes/k3s, and vLLM-Omni.
- Benchmarked GPU inference performance, including latency, reliability, and VRAM utilization.
- Implemented infrastructure monitoring and observability using Prometheus and Grafana.

Full Stack Robotics Engineer Intern

Smart Methods

06/2025 – 08/2025

- Engineered integrated robotic systems by bridging mechanical designs with ARM and ESP32 microcontrollers for precise motor control.
- Deployed real-time Computer Vision and NLP models on embedded systems to enable autonomous perception and interaction.

PROJECTS

Open-Source Image Generation Evaluation & Deployment

AI Infrastructure & MLOps Capstone Project

09/2026 – 09/2026

- Benchmarked commercial and open-source image-generation models using a reproducible evaluation pipeline.
- Deployed quantized models with Docker, k3s/Kubernetes, and vLLM-Omni behind authenticated APIs.
- Measured latency, reliability, and GPU/VRAM usage, with monitoring via Prometheus and Grafana.

PRECRASH AI

AI-Driven Traffic Diagnostic and Road Safety System | Capstone Project

09/2025 – 06/2026

- Developed real-time YOLOv8/LSTM safety system for predictive vehicle detection and diagnostics.
- Led 8-member team through full lifecycle: from CARLA simulation to NVIDIA Jetson hardware deployment.
- Optimised models via TensorRT and ROS 2 to achieve low-latency edge inference and node synchronisation.

Smart Restaurant Ordering System

YummyGo-Restaurant

04/2025 – 05/2025

- Developed an IoT-based restaurant ordering system enabling customers to place and track orders through a mobile application.
- Integrated ESP32 and Bluetooth communication to provide real-time order notifications between customers and restaurant staff.

CERTIFICATES

Full Stack Robotics Engineer
MECAI Full Stack Engineer by IEEE

SKILLS

Programming & Systems Python, C++, SQL, Linux/Ubuntu, Bash	AI & Computer Vision PyTorch, OpenCV, YOLOv8, TensorRT, ROS 2
AI Infrastructure & MLOps Docker, Kubernetes/k3s, vLLM/vLLM-Omni, Prometheus, Grafana, Model Serving, GPU Benchmarking	Hardware & Platforms NVIDIA GPUs, NVIDIA Jetson Orin Nano, ESP32, ARM Microcontrollers
Soft Skills Technical Leadership, Analytical Problem-Solving, Project Management, Technical Communication	

COURSES

AI Skills Accelerator <i>IBM & King Saud University</i> • Advanced Machine Learning, MLOps, and industrial AI workflows.	01/2026 – 03/2026
Getting Started with AI on Jetson Nano <i>NVIDIA Deep Learning Institute</i>	04/2026
AWS Certified AI Practitioner Learning Path <i>Saudi Digital Academy</i> AI, Generative AI, and AWS cloud fundamentals.	09/2026

LANGUAGES

- Arabic
- English
